SUMMARY

- Results-driven Team Lead and Senior Full Stack Developer with **8** years of hands-on experience working with international and local clients building starting from enterprise-grade applications to mission critical systems that are actively powering business operations today. My track record extends beyond a CV, developed high-performance systems used daily by **thousands** of end users across multiple regions, ensuring scalability, reliability, and measurable business impact.
- Expertise in modern technologies, delivered **123+** web-based projects and managing databases with over **4,000,000** records.
- Developed systems processing more than **\$35,000,000 USD annually**, demonstrating strong capabilities in handling complex financial operations.
- Successfully migrated more than **97,000** legacy system records to our newly developed system database.
- Successfully handled end-to-end registration for **133,000+** attendees, covering hotel reservations and flight bookings.

EDUCATION

B. Sc (bachelor's degree in software engineering), College of Computing and Informatics (2015-2018)

TECHNICAL EXPERTISE

Microsoft Technologies	C#, .Net Core 2.1, 3.1,6.0, 8.0, ASP.Net, MVC, Web API, AzureDevOps,SignalR,MicrosoftIdentity,IdentityServer(Duende), Entity Framework Core (EF), LINQ, xUnit, Moq,BenchmarkDotNet, Hangfire, Jwt Authentication, Umbraco
Java Technologies:	Java 21, Spring Boot 3.3, Spring Framework 6, Spring Data JPA

	(Hibernate 6), Spring Security, OAuth 2.0, JWT, Keycloak, Springdoc OpenAPI (Swagger), Jakarta Bean Validation, MapStruct, Lombok, Quartz Scheduler, Apache Kafka, Maven.
--	---

Programming Languages	C#, Java, JavaScript, TypeScript, SQL
Frontend Frameworks/Libraries/Markups	Angular, React, HTML5, CSS3, SCSS, Tailwindcss, Bootstrap, Material Design, Ant Design
RDBMS	SQL Server, MySQL, PostgreSQL, SQLite
NoSQL	MongoDB, Redis
Development Tools	Visual Studio .NET, Visual Studio Code, Postman, IntelliJ
Cloud	AWS S3 Bucket, Azure DevOps.
Additional Technologies	OAuth 2.0, JWT, WebSocket, Docker, K8S, Microservices, RabbitMQ, Redis,

:

EXPERIENCE DETAILS

◆ Working as a Team Lead (senior full stack developer), Custor, Ethiopia (Onsite)	Dec 2023 – now
◆ Worked as a backend developer for Projet Solaire, France (Remote)	Feb 2024 – Oct 2024
◆ Worked as a Software Engineer for <i>Excellerentsolutions</i> , US (Remote),	Aug 2021 - JAN 2024.
◆ Worked as a full stack developer for <i>Eptisa Servicios de Ingeniería, Spain Madrid</i> (Remote)	Feb 2023 AUG 2023.
◆ Worked as a Full Stack Developer for <i>Engage2excel</i> , US (Remote),	Aug 2022 - JUN 2023.
◆ Worked as a Full stack developer for <i>MMCYTECH</i> , New York, Dubai (Remote),	Aug 2019 - Aug 2021.

PROJECT DETAILS

Project #1:
Client: Civil Service Commission
Role: Senior Full Stack Developer

Project: ICSMIS CENSUS

The Integrated Civil Service Management Information System (ICSMIS) is a digital platform implemented to modernize civil service human resource management in Ethiopia. As part of this initiative, a nationwide census of government employees is being conducted to collect and store employee data in a centralized database.

Through this digital system, the census is required in order to register and store government employees' information in a centralized database.

Responsibilities/Achievements:

- Design, develop, and maintain scalable full-stack applications using **Angular (front-end)** and **.NET / .NET Core (back-end)**.
- Build responsive, high-performance user interfaces using **Angular, TypeScript, HTML5, CSS/SCSS**, and modern UI libraries.
- Develop robust server-side logic using **ASP.NET Core, C#, Entity Framework**, and **LINQ**.
- Design and optimize **relational databases** (SQL Server), including schema design, indexing, and performance tuning.
- Implement **authentication and authorization** mechanisms (JWT, OAuth2, Identity, role-based access control).
- Apply **clean architecture, SOLID principles**, and best practices for maintainable and testable code.
- Participate in **technical decision-making**, system design reviews, and backlog refinement.
- Troubleshoot, debug, and resolve complex production issues across the full stack.

TECH STACKS: Asp.net core , Entity Framework, Fluent Validation, CQRS, MediatR , AutoMapper, OAuth 2.0, JWT, (Microsoft Identity, IdentityServer(Duende)), SQL server 2022, Angular, Rxjs, Git, Jira, Agile methodology, Swagger / OpenAPI.

Project #2:

Client: City Government of A.A Driver, Vehicle, Permit, and Control Authority

Role: Senior Full Stack Developer/Team Leader

Project: Integrated Vehicle Services Management System

A centralized digital platform designed to streamline and modernize vehicle-related services across the city. The system integrates multiple government and private sector processes such as vehicle registration, inspection, licensing, taxation, and service tracking into a single, user-friendly solution. It improves efficiency, reduces paperwork, enhances transparency, and provides real-time data for better decision-making and service delivery.

Responsibilities/Achivements:

- Developed a **multi-tenant** Integrated Vehicle Services Management System, automating operations for over **970,000** Vehicles across the city and other regions.
- Managing an application with **10,000 - 20,000** active daily users.
- Collaborate with **product owners, QA, and designers** to define requirements

- Led **technical decision-making** and evaluate new tools/technologies to improve system architecture.
- Designed, developed, and maintained **scalable RESTful APIs** and **modular Angular applications**.
- Implemented **authentication and authorization** (JWT, OAuth2, OpenID Connect)
- Conducting code reviews and pull request merging, offering constructive feedback to peers to ensure high code quality and adherence to standards.
- Mentored **5 junior developers**, significantly improving their skills and contributing to successful project outcomes.
- Developed performance management portal for high level managements

TECH STACKS: Asp.net core 8.0, Entity Framework 8.0.4, Fluent Validation 11.7.1, CQRS, MediatR 12.2.0 , AutoMapper 14.0.0, OAuth 2.0, JWT, (Microsoft Identity, IdentityServer(Duende)) 7.2.1, SQL server 2022, Syncfusion 23.1.38 , DevExpress 23.2.4 , Highchart 4.0.0, Angular 18.2.11, Rxjs, , Git, Slack, Jira, Agile methodology,xUnit, Docker, BenchmarkDotNet 0.15.2, Sql Job, Stored procedures,Swagger / OpenAPI.

Project #3:

Project: - Projet Solaire (France solar system)

Role: backend developer (Freelance)

- The first online platform for solar energy tenders in France , since the Industrial Revolution, homes and communities can produce their own energy at home. For this reason, want to redefine the relationship between homes and energy by promoting proximity, sharing, and progress. Working on different modules among them

Modules Developing:

- Hardware marketplace home: To reduce fragmentation in the hardware marketplace and reduce time procuring and ordering hardware we want to offer a inclusive hardware experience that is seamless from the planning and management of hardware
- ✓ Supplier portal
 - Manage their product listings
 - Respond to their RFQ's
 - Manage their orders
 - Manage their sub users
 - Manage their deliveries
 - Pool offers
- ✓ Installer portal
 - Create request for quotes to suppliers
 - Manage their hardware on the platform
 - Can participate in pool / group buying offers
- ✓ Householder portal

- Create request for quotes to suppliers

TECH STACKS: Java 21, Spring Boot 3.3.x, Spring Framework 6, Spring Data JPA (Hibernate 6), MongoDB, Spring Security 6, OAuth 2.0, JWT, OpenID Connect, Springdoc OpenAPI 2.x (Swagger), Jakarta Bean Validation (Hibernate Validator 8), CQRS, Framework, MapStruct 1.6+, Lombok, Web Socket, Kafka, Maven, Docker, Git, Agile, Teams, Vue.js.

Project #4:

Client: - Malawi Government

Role: Senior full stack developer /Contract

Project: MEGP (Malawi Electronic Government Procurement)

- Developed a robust **e-Government Procurement (eGP) platform** to modernize and streamline national procurement processes for the **Malawi government**, enhancing transparency, efficiency, and supplier engagement. The system supports **6 integrated modules** and serves multiple government agencies and private sector suppliers.

Modules Developed:

- **Procurement Plans:** Publish annual procurement schedules for all government agencies.
- **Tenders:** Manage and display open tender notices and submission tracking.
- **Procurement Information:** Provide analytics and access to tender statistics, contract awards, and reports.
- **Registration Services:** Digitize supplier registration workflows into the national suppliers list.
- **Suppliers List:** Maintain and validate active and debarred suppliers in real time.
- **Resources:** Centralize access to procurement-related legislation and documentation.

Key Achievements & Technical Contributions:

- **Backend Architecture:** Built using **Asp.Net Core**, implementing modular services for core functions such as tender management, registration, and procurement planning.
- **Data Layer:** Utilized **EF** with **MSSQL**, optimizing schema design and query performance for handling large-scale procurement data.
- **Security:** Designed and implemented authentication and authorization using **OAuth 2.0** and **OpenID Connect**
- Worked with **JWT access and ID tokens** for securing APIs
- Integrated **Microsoft Identity** and Implemented **Duende IdentityServer** for centralized identity and token management

TECH STACKS: ASP.NET Core (.NET 8), Entity Framework Core, SQL Server, ASP.NET Core Identity, OAuth 2.0, OpenID Connect, JWT, Duende IdentityServer, Swagger/OpenAPI, FluentValidation, CQRS (MediatR), AutoMapper, Quartz.NET, RabbitMQ, Docker, Git, Agile, React.js

Project: #5

Client: *Eptisa*

Role: Senior Backend Developer

Project: Road Accident Data Management System

RADMS is conduct a nationwide accident data collation, digitizing the paper-based accident records and mapping the accident locations based on the available geographical details for the last six years.

This database will be hosted at the National Road Safety Council Office (NRSCO) and will be available for the usage of other stakeholders at national level to plan, design, develop and implement road safety interventions, so as to improve the road safety environment throughout the Federal Democratic Republic of Ethiopia.

Responsibilities:

- Digitizing the accident records in database format into the RADMS.
- Mapping these accident records on an ArcGIS platform.
- Analysing accident data using statistical tools and simulation software and conduct basic analysis by adopting simple statistical inferences to understand the cause-and-affect kind of scenarios related to road accidents.
- Designed, developed, and maintained RESTful APIs, delivering a robust and reliable solution.
- Migrated approximately 90,000 paper-based accident records to the system.
- Writing clean and maintainable code while adhering to best practices.
- End-to-end software design and development

TECH STACKS: Angular, Rxjs, Asp.net core,Entity Framework, xUnit, CQRS, PostgreSQL, Git, AzureDevOPs, Git, Teams, Slack, Jira, Agile development,Swagger / OpenAPI.

Project #6:

Client: *Depalma Studios*

Role: *Full Stack Developer*

Project: Vendorful

Vendorful - which is an e-commerce web-based application, that offers SaaS solutions for both sides of b2b relationships.

Responsibilities:

- Designed and implemented user-friendly interfaces for the frontend, ensuring a smooth shopping experience.
- Built and maintained server-side logic, APIs, and databases to support the platform.
- Integrated third-party payment gateways such as PayPal and Stripe to facilitate secure transactions.
- Troubleshoot and debug issues across the full stack, from front-end interfaces to back-end systems, to ensure high performance and reliability.
- Implemented **authentication and authorization** (JWT, OAuth2, OpenID Connect)
- Collaborated with **product owners, QA, and designers** to define requirements

TECH STACKS : React.js, RTK, Asp.net core, Swagger / OpenAPI, Entity Framework, FluentValidation , CQRS, MediatR , AutoMapper , PostgreSQL, Git, AzureDevOPs, Teams, Agile,xUnit, BenchmarkDotNet.

Project #7:

Client: *Engage2excel*

Role: *Full Stack Developer*

Project: Recognition Platform / Web Report

Developed and maintained the **CXS Platform**, a customizable employee recognition system, implementing **web-based reporting** for high-level managers across multiple companies. Built features to track milestones and achievements, supporting award creation and subscription-based access, while ensuring scalability, usability, and data-driven insights.

Responsibilities:

- Developed robust APIs to enable seamless data integration and accurate reporting.
- Contributed to the front-end development using React, creating dynamic and responsive interfaces for end-users to access and interact with the reports.
- Optimized a long-running SQL query by 95% (**50 sec–105 sec**) to execute in just **1–3 seconds** by analyzing execution plans, restructuring joins, and implementing proper indexing strategies, significantly improving application performance.
- Designed and implemented backend services to efficiently manage over **4,000,000** records.
- Optimized database queries to enhance data retrieval speed and performance.
- Achieved a cost reduction of more than **\$42,000** annually by eliminating the need for Tableau software.

TECH STACKS : React.js, Zustand, Asp.net core, PostgreSQL, Entity Framework, FluentValidation , CQRS, MediatR , AutoMapper, Git, AzureDevOPs, Teams, Agile,BenchmarkDotNet, Hangfire, xUnit, Swagger / OpenAPI, Docker, Microservice, RabbitMQ, SonarQube,

Project #8:

Client: *Excellerentsolutions*

Role: *Software Engineer*

Project: Enterprise Project Portfolio

The Enterprise Project Portfolio is a comprehensive ERP (Enterprise Resource Planning) system developed to streamline and automate various daily tasks across an organization. It is designed to improve efficiency, transparency, and collaboration by integrating key business processes into a single platform. The system is composed of six essential modules, each serving a specific purpose within the organization:

1. **Timesheet Module-** Automates the tracking of employee work hours, attendance, and leave management. Employees can log into their hours, and managers can monitor productivity and approve timesheets.

2. **Project Management Module** - Provides tools for planning, executing, and monitoring projects. This includes task assignments, milestones, deadlines, resource allocation, and progress tracking.
3. **Employee Registration Module**- Manages employee data from onboarding to off boarding. This includes personal details, job roles, salary information, and more.
4. **Applicant Tracking Module** - Automates the recruitment process by managing job postings, candidate applications, interviews, and selection processes.
5. **User Management Module** - is a system component that handles **creation, modification, and deletion of user accounts**, manages **roles and permissions**, enforces **authentication and authorization**, and provides **tools for monitoring and maintaining user access**.
6. **Performance Management Module** - Enables continuous monitoring and evaluation of employee performance against set goals. Includes features for goal setting, performance reviews, feedback, and appraisal management.

Responsibilities:

- Designed and implementing RESTful APIs with ASP.NET Core to handle data exchange between the frontend and backend, ensuring efficient and secure communication.
- Collaborated with UI/UX designers to translate design mockups into responsive and user-friendly Angular components, while adhering to best practices in web development.
- Collaborated with cross-functional teams to define project scope, set timelines, and ensure on-time delivery of features.
- Optimized application performance and scalability, focusing on both frontend performance (Angular) and backend efficiency (ASP.NET Core), including database management and server-side logic.

TECH STACKS : Angular, RxJs, Asp.net core, Backgroundservice, PostgreSQL, Chart.js, Git, Bitbucket, Teams, Agile development methodology,xUnit, BenchmarkDotNet, Hangfire, Swagger / OpenAPI.

Project #9:

Client: Altour, McDonald's, MasterCard

Role: Web Developer

Project: Event Management Web Based Projects

Developed a cloud-based registration and payment processing software that empowers you to manage your entire event life cycle, from initial planning to final event reporting. This powerful registration tool can meet the needs of in-person, hybrid, and virtual events of all shapes and sizes, from a free educational series to a small training to a thousand-person conference.

Which includes

- Event and Session Surveys
- Robust Reporting and Report Portals

- Speakers and Exhibitor Management
- Custom Web Design and Registration Experiences

Responsibilities:

- Developed an event-based web application event management application.
- Worked closely with event managers, marketing teams, and other stakeholders to understand their requirements and translate them into technical solutions.
- Involved in Regression test plans for Regression testing.
- Delivered **123+** projects successfully for US and Europe clients.
- Able to register **133,000+** attendees with their hotel and flight booking.

Environment:  Java, Spring Boot, Hibernate, PostgreSQL, Angular, JavaScript, HTML5, Css3, Cvent, Aventri, AWS, Slack.
